Summary

Service-operations professional with **7 years** spanning frontline service delivery, data analysis and product ownership. I sit between **frontline users, internal owning teams and engineering**, finding where a global internal process breaks, translating it into a solution, and automating it. Currently **Project Lead** for an AI self-service assistant serving SAP's **worldwide partner ecosystem**, and builder of two production automations that handle **3,000+ service requests a year** at a **sub-1-hour** average SLA. Fluent in English and Mandarin; comfortable working across time zones and cultures.

Experience

SAP (China) Co., Ltd. Chengdu, China

Partner Support Specialist — Service Platform & AI Products Jul 2022 - Present

- **Product & Project Leadership: Project Lead** for **Joule for Partner**, an AI self-service assistant serving SAP's **global partner ecosystem across all regions**. Clustered **12 months of ticket history (3,000+ cases)** into a prioritised problem set, converted it into a development backlog, aligned the roadmap and release stages with engineering, and run **bi-weekly feedback cycles with 4 internal teams and over 30 pilot partner organizations**. Each release is measured on **ticket deflection rate and answer accuracy**, not feature count.
- **AI Workflow Automation:** Designed and shipped **2 AI automations now running in daily operations**. (1) **RAG draft-reply skill** — ingests an incoming ticket, retrieves policy and product documents from a vector database, drafts a contextual reply, and holds it for human approval before sending; cut per-ticket drafting from **1 hour to under 10 minute**. (2) **End-to-end ELT pipeline** — Python ingestion, AI-assisted analysis and automated Power BI dashboard publishing; **automated 85% of weekly reporting**, reduced report latency **40%** and reporting errors **32%**.
- **Service Operations & SLA:** Personally resolve **3,000+ partner service requests per year (~250/month)** at an average first-response SLA of **under 1 hour**, down from **4.6 hours** — a **78% improvement** delivered through automation and knowledge-base restructuring rather than added headcount.
- **Cross-Team Stakeholder Management:** Host **weekly "Drop-In" clinics** with Partner Managers to surface issues early, then act as the single bridge across internal owning teams until each case is closed end to end. Guided Novation customers through transitions to new implementation partners, delivering **12 successful showcases**.

Xiamen Air Xiamen, China

Sales Analyst Aug 2019 - Jul 2021

- **Process Automation & Analytics:** Replaced a manual, spreadsheet-based reporting cycle with SQL and Python routines covering **over thousands sales cycles per month**, cutting data errors **86% (5.3% ’ 0.8%)** Built Linear Regression and K-Means models feeding directly into the pricing process, lifting **average ticket price 18%**.
- **Cross-Border Partner Coordination:** Negotiated a **codeshare agreement with KLM Royal Dutch Airlines**, aligning schedules, inventory and commercial terms across two carriers and expanding APAC coverage to **12 new destinations**. Chaired **quarterly pricing summits** with competing carriers to align regional rates, the cross-organisational alignment achieved with no formal authority.
- **Channel Management:** Ran ROI analysis across distribution channels and reallocated **78% of marketing budget** to the highest-return platform, driving monthly GMV to **$3M**. Co-ran joint campaigns with external OTA offices targeting priority customer segments.

Education

Renmin University of China — Master's degree of International Relations
Study of NGO — Sep 2017 - Jul 2019

Xiamen University — Bachelor's degree of International Relations
Comparative study of South East Asia — Sep 2013 - Jul 2017

Projects

B2B Rebrand & ERP System Development with AHANA — May 2026 - Jul 2026

• **Project Manager**: Led end-to-end project delivery for AHANA, a B2B ethical sourcing platform connecting boutique retailers with verified artisan cooperatives in Southeast Asia. Navigated the full project lifecycle — from requirements gathering and prototype design to stakeholder reviews and iterative improvements.

• **Stakeholder Presentation**: Presented the AHANA prototype and product vision to customers and internal stakeholders, walking them through the live demo, sample dataset, and website journey narrative. Collected and synthesized feedback to define product priorities and refine the go-to-market approach.

• **Product Scope**: Platform features include ML-powered demand forecasting and product recommendations, producer verification and audit framework, and a supplier-facing website with catalog browsing, shortlisting, and partnership intake.
